

Data Disk Assembly

Students will construct a data disk of an assigned explorer using these directions. You will need:

- Tag board
- Brass brad
- scissors
- ruler
- pencils

1. Trace one Data Disk Cover onto tag board. Cut out.
2. Trace one Data Disk (the one with the quarter divisions) onto tag board. Cut out. You now have two patterns traced on tag board.
3. Layer the two disks together. Use a brass brad to join the two disks so that the cover is on the top and the data disk in underneath.
